Order from LC or SLA mi$1.80, ph$1.80 61-15812

Trans. of Akusherstvo i Ginekologiya (USSR) 1959 [v. 35] no. 3, p. 59-63.

Observations of the motor activity of human fetuses from 16.5 to 29 weeks of gestation showed that every reaction (grasping, sucking, sneezing) passes two phases in its development. The first phase of local response is the result of heterochronic maturation of morphological structures, which ensure the above reaction. The second phase is a whole, integrated response having an adaptive character is due to the integration of mature embryonic structures of the truncal portion of the brain.
